

## **FYNOL-EDA**

FYNOL-EDA acts as an anti-settling agent, emulsifier and dispersing agent. FYNOL-EDA has been generally used successfully in combination pigment systems.

### **SPECIFICATIONS :**

APPEARANCE : Light Brown Liquid

NATURE : Non-Ionic

ACID VALUE : Less than 3

pH : 7.5 to 8.5

FYNOL-EDA is an excellent additive for all types of paints including cement paints.

In enamels (Air-drying & Stoving type), 0.25 - 0.75% of FYNOL-EDA on the weight of pigments & extenders is added at the grinding stage.

FYNOL-EDA improves dispersion of pigments & eliminates floating. It reduces grinding time and improves flow properties.

In combination systems, e.g. Carbon Black, Pthalocyanine Blue, Titanium Dioxide, Lemon Chrome, FYNOL-EDA is the ideal dispersing agent to prevent floating.

FYNOL-EDA is used to increase effectiveness of Soya Lecithin and much better dispersions are obtained with FYNOL-EDA in combination with Soya Lecithin than Soya Lecithin alone.
