

## **FINAFOG 700**

**DESCRIPTION** : Antifog additive for Polyethylene/EVA films specially recommended for **agricultural films**

**SPECIFICATIONS** : Appearance : Microbeads  
Melting point : 55±5 deg C

(Slight variations in the specifications stated due to raw materials and production conditions are possible though they have no influence on the application properties described.)

**APPLICATIONS** : Effective antifog agent for PE/EVA films

**PROPERTIES** :

- FinaFog 700 converts water droplets formed on the film into a uniform transparent water layer
- Suitable for cold and/or hot fog applications.
- Provides maximized light transmission via maintaining the film clarity, thereby results in overall visibly enhanced crop growth/quality.
- Minimizes crop burning through 'lens effect'
- It imparts effectively lasting antifogging performance in PE films, especially suitable for agricultural application
- Can be used for packaging film for standard hot and cold fogging conditions if solid physical form is preferred.  
**Not recommended for cold storage (at around minus 20 deg C)**

**METHOD OF USE** : By preparing a masterbatch

**USE LEVEL** : 0.5 to 5% (as per end-use requirements)

**STORAGE** : It may form soft agglomerates during transit/storage depending upon its particle size, compaction caused during stacking of material and prevailing atmospheric temperatures during transit/storage conditions due to its fatty nature & inherent characteristics. Finer the particle size more can be such agglomeration. However, this agglomeration does not affect the product's performance. These soft agglomerates can be broken easily if necessary.
